EDUCATION

- Manipal University Jaipur** Rajasthan, India
Bachelor of Technology - Computer Science and Engineering; GPA: 8.5 *Sep 2022 - Jul 2026*
Courses: DBMS, Operating Systems, OOP, Data Structures, Algorithms, Software Engineering, Computer Networks

SKILLS SUMMARY

Languages	Java, TypeScript, SQL, React.js, Spring Boot, Node.js, Express.js
Tools & Platforms	Git/GitHub, MySQL, Postman, JIRA, Firebase, Jenkins, Google Cloud Platform (GCP), MS Excel
Product & Delivery	Agile/Scrum, Requirement Analysis, Stakeholder Management, User Stories, Product Roadmap, Cross-Functional Collaboration, Workflow Optimization, Feature Planning, UAT, Technical Documentation, Sprint Coordination
Core Concepts	REST APIs, Database Design, Object-Oriented Programming, SDLC, OAuth2

EXPERIENCE

- Infosys** Mysore, India
Systems Engineer Intern *Jan 2026 - Present*
 - Subscription Billing Workflows:** Architected end-to-end design of recurring billing automation, retry orchestration, and proration handling using Spring Boot and MySQL across 3 delivery sprints.
 - Backend & Schema Ownership:** Spearheaded backend API development, frontend integration, and relational schema design across 23 database tables supporting subscription lifecycle workflows.
 - Frontend Module Development:** Delivered 8+ workflow-oriented frontend modules in React and TypeScript integrating secure authentication and role-based access control.
 - Technical Communication:** Led walkthroughs during project reviews for a 5-member team, explaining workflow execution paths, architecture decisions, and module interactions end-to-end.
 - Agile Delivery:** Coordinated debugging, integration, and feature delivery across backend, frontend, and database workstreams through 3 structured sprint cycles.

PROJECTS

- Seriva - AI Wellness Companion** [GitHub] *Jun 2025 - Sep 2025*
Full-Stack Developer
 - AI Platform:** Shipped AI-powered wellness platform integrating conversational AI with Three.js-based 3D avatar interaction, reducing average response latency by ~40% through optimized API communication flows.
 - Frontend Architecture:** Engineered modular React and TypeScript interface development supporting dynamic conversational workflows and responsive UI rendering.
 - Cloud Deployment:** Configured secure API configuration and production deployment using Google Cloud Platform (GCP) and Firebase services.
- PharmaFleet - Medicine Inventory System** [GitHub] *Feb 2025 - Apr 2025*
Product Designer & Full-Stack Developer
 - Workflow Digitization:** Drove digitization of manual pharmacy workflows, reducing transcription errors from ~40 incidents/week to near-zero – a 70%+ improvement – through structured digital record management.
 - Dashboard Design:** Defined and launched a workflow-oriented dashboard supporting inventory tracking, audit visibility, and compliance-focused reporting operations.
 - Database Architecture:** Structured relational schema supporting high-frequency inventory updates while maintaining operational consistency.
- WePay - Digital Wallet & Payment System** [GitHub] *Oct 2024 - Dec 2024*
Backend & Systems Developer
 - Payment Platform:** Shipped wallet-based payment platform supporting transaction workflows, secure authentication flows, and role-based user operations.
 - REST API Design:** Owned design and delivery of 9 REST APIs covering wallet operations, transaction tracking, and session-controlled financial workflows using Spring Boot and MySQL.
 - Systems Architecture:** Designed modular backend workflows emphasizing transactional consistency, scalable API communication, and secure request handling.

LEADERSHIP & TEAM COORDINATION

- Project Lead & Scrum Master** Manipal University Jaipur
Cross-Functional Academic Project Teams *2023 - Present*
 - Sprint Facilitation:** Facilitated sprint planning, backlog grooming, and retrospective sessions across 3+ project cycles, keeping cross-functional teams aligned on delivery priorities and timelines.
 - Unblocking & Dependency Management:** Identified and resolved cross-team blockers in real time – coordinating between frontend, backend, and database workstreams to maintain execution momentum.
 - Stakeholder Presentations:** Owned end-to-end preparation and delivery of project demonstrations to faculty evaluators, translating technical architecture and workflow decisions into clear stakeholder narratives.
 - Documentation & Execution Tracking:** Defined and maintained SRS documentation, task allocation frameworks, and sprint tracking artifacts ensuring full traceability from requirement to delivery.
 - Team Mentorship:** Guided team members through technical ambiguity – conducting walkthroughs on system design decisions, integration patterns, and workflow execution to build shared ownership.
